

Assignment 03 Marking Rubric

Overall Grading Scale

	Description			
Exceptional code quality across all questions with consistent style and thorough documentation	Good code quality with consistent style and adequate documentation	Acceptable code quality with some inconsistencies in style or documentation	Poor code quality with many inconsistencies	Very poor code quality or incomplete implementation
Excellent	Well done	Very good	OK	Need to review
HD	D	C	P	F

OOP Design

	Description			
All features implemented correctly and the game is fully playable at all three grid sizes.	Most features work correctly with minor issues	Several features work but with noticeable errors	Basic attempt but significant errors	No meaningful attempt or code does not run
Strong OOP design; encapsulation, inheritance and polymorphism all used purposefully	Good OOP design with mostly clean structure; polymorphism present	Some OOP structure but with design weaknesses	Minimal OOP structure; classes exist but are little more than containers for procedural code	

Cancelled dialogs, non-image files and off-image clicks handled gracefully; errors shown in a message box	Robust with minor gaps	Some error handling; program may crash on unusual input	Crashes on common misuse	
Excellent	Well done	Very good	OK	Need to review
HD	D	C	P	F

Image Processing

	Description			
Images load correctly for JPG, PNG and BMP; resized to fit the window with correct aspect ratio; cropped/padded so the grid divides evenly	Loading and scaling work with minor issues	Images load for at least one format but scaling is off or tiles are uneven	Image loading attempted but has errors	No image loading implemented
All three grid sizes work	Three grid sizes work with minor issues	Only one or two grid sizes work	Grid selection present but tiling unreliable	
Three or more distinct transformation types implemented;	Three types work; randomisation mostly correct with rare edge cases	Two types working, or three with noticeable issues; some randomisation but tiles occasionally targeted twice	One type implemented or transformations are crude	

chosen randomly on every load; count scales with grid size; no tile targeted twice;				
Tiles correctly reassembled into a single image; all overlays drawn	Reassembly correct; most overlays drawn	Reassembly works but some overlays missing	Reassembly has visible errors	
Excellent	Well done	Very good	OK	Need to review
HD	D	C	P	F

Tkinter GUI and Gameplay

	Description			
Original and transformed images displayed side by side; file dialog and grid-size control work; loading a new image fully resets the round	Layout and loading work with minor issues	Images display but layout is off, or new image loading does not fully reset state	Only one image shown, or file dialog unreliable	No image display or file dialog
Selects, swaps, rotates, flips, all mapped accurately to tiles; selection highlight shown; image re-rendered after every action;	Interaction works with minor issues	Interaction works but one action is unreliable or mapping is off near tile edges	Interaction attempted but unreliable	

clicks outside the image ignored				
Moves, tiles-left displayed and updated after every action;	Counters and score work with minor issues	Counters and score work with minor issues	Basic counter present but inaccurate	
Hint implemented correctly;	Hint works with minor issues	Hint marks only one image, or limit not enforced	Hint attempted but unreliable	
Player notified on completion and input locked; Solve solves the puzzle	Completion and Solve work with minor issues	One of the two works correctly, the other has issues	Basic attempt at either feature but neither works reliably	
Excellent	Well done	Very good	OK	Need to review
